

Saving on laundry costs is in your hands

Easy to use. Programmes can be sent by e-mail, shorter programming time.

Reduced consumption

of water, energy, chemical products and time. A programme for every type of linen.

Versatility; a range of wash cycles catering for heavily soiled to delicate garments

INT Inteli Manager Tool eXpert

Software and Hardware for developing programmes for **GIRBAU machines** equipped with **INTELI CONTROL**, from your computer.

THE OPTIMUM PROGRAMME FOR EACH WASH

A good washing programme is one that achieves the required washing action with the lowest consumption of time, water, chemical product and energy. This is why Girbau has developed the IMTx (Intelligent Manager Tool Expert), a software application for Girbau washing **machines with Inteli control**, which allows the user to adjust all the parameters involved in the washing process very easily. Stop using those hard to programme generic programmes. Optimise your processes with the programme most suited to each client, to each requirement.

PROGRAMMING IS EASY

choosir need fo you nee to be ea program and the by e-m. The IM with the **IZSEC**

A system of icons exclusive to Girbau will guide you easily and quickly in choosing the different parameters involved in a washing process, without the need for complex instruction manuals. You can configure the programmes you need from your computer, saving them with a name that allows them to be easily identified (name of customer, the fabric to be treated, etc.). The programmes can be stored on your computer or recorded on a memory card, and then loaded into as many Inteli washing machines as you require, or sent by e-mail to your chemical product supplier for adjustment.

The IMTx system has a Plug &Play installation. You only need to insert the CD with the software into your computer.

EVOLUTION

With its spirit of continuous improvement, IMTx retains the essence of the previous

GTI PACK while incorporating new tools and applications.

- Creation and modification of washing programmes on a virtual display enabling the full programmes to be displayed on a single screen.
- Full graphic display of the washing program, enabling all the parameters that affect the process to be identified quickly. Configuration of the modifiable parameters on a single screen for easy viewing.
